

To complete this activity, the participant will need to access and read the Anesthesia chapter within the Alexander's Care of the Patient in Surgery textbook. Rothrock, J.C. (Ed.). (2019). *Alexander's care of the patient in surgery* (16th ed.). St. Louis, MO: Elsevier., p. 107-140.

Across

1. A drug that can be added to a spinal to make the medication heavier than CSF.
4. The medical air hose in the operating room is commonly which color?
6. The narrowest anatomical part of the adult trachea. (2 words)
7. The type of sedation that is defined as the patient demonstrating a depressed level of consciousness.
10. Anesthesia will often add this to an IV medication to decrease the irritability to the vein.
11. Measurement of carbon dioxide concentration is obtained using a _____.
13. The classification system is used to estimate perioperative risk based on the patient's physiologic condition.
14. The abbreviation for the most common minor complication of anesthesia.
15. _____ is the universal color for an oxygen hose in the operating room.
16. The time from when first anesthetic medication is administered to the period of time from when the patient loses consciousness.

Down

2. The anesthetic agent, _____, may cause fasciculations due to depolarization.
3. A _____ index system is used by anesthesia to monitor for intraoperative awareness.
5. Anesthesia typically uses a _____ for intubation.
6. A premedication often given to surgical patients in the preoperative setting to decrease anxiety.
8. _____ is the last of the five senses to "surrender under anesthesia".
9. To occlude the esophagus and prevent aspiration, _____ pressure is typically applied during intubation.
10. This type of block uses a double tourniquet on the extremity.
12. Name the respiratory condition that typically occurs before dysrhythmias are noted.

This is an example of a future points activity for recertification in collaboration with CCI.
